Why is it so Good?
Why does it work so Well?

»Low operational costs, uses less than 40 watts of power. (one light globe)

»Does not false alarm.

»Can be zoned for alarm management and monitoring, up to 48 areas.

»Fully integrates with any existing alarm system, CCTV or access control.

»Totally fulfils your Duty of Care

»Installation is independently inspected, audited, tested and certified

»Deters and Detects (unique to this system)

»It denies would be intruders access to your perimeter, keeping them out and your property safe inside

»Your alarm will trigger only when their persistence reaches a predetermined level, which is programmed according to the degree of security you need

- *Experience teaches us electricity is to be avoided, we are taught from an early age not to touch it. The 'electric' nature of the fence creates an effective physiological barrier*

- *Safety parameters are standard features of any product development initiative, properly constructed fences are safe and effective.(AS3129 and AS3016)*

- *HV Pulses around 6 to 8kV are transmitted 50 times per minute and monitored. Persistent attack activates the alarm.*
